% Light Loss	Approximately 15%
--------------	-------------------

Maintenance

Rinse with water to clear cells, blow dry

The rugged killFlash® model #M22-G ARD fits the U.S. Army's green M-22 (Steiner) binoculars. It eliminates reflections outside the binoculars' field of view and diminishes reflections within the field of view, with no loss in resolution and only slight light loss. With its patented geometry, a 1" thick (25mm) honeycomb of tubes gives the model M22-G killFlash® ARD the same glint protection ability as a cylindrical sun hood over 21" (533 mm) long.

If they don't see you... they don't shoot you.®
