length 2.1" (53mm)

Weight Pair 2 oz. (57g)

Housing Material santoprene with acetal core

Filter Material Resin-reinforced composite
honeycomb with special
matte black coating

Temp. Range +160 to -60 F
+ 71 to -51 C

Optical

% Light Loss Approximately 15%

Maintenance

Rinse with water to clear cells, blow dry

The rugged killFlash® model M24/MINI-ARD fits the U.S. Army's M-24 Miniature Binocular. It reduces or eliminates reflections from the binoculars' objective lenses and laser filters, with no loss in resolution and only slight light loss. With its patented geometry, a 0.5" thick (13mm) honeycomb of tubes gives this killFlash® ARD the same glint protection ability as a conventional cylindrical sun hood over 5 1/2" (140 mm) long. The ARD comes with an integral dust cover.

If they don't see you... they don't shoot you.®
