Tenebraex Corporation www.camouflage.com

SPECIFICATIONS

Mechanical

Dimensions o.d. 2.2" (37mm)
length .7" (17mm)

Weight Each .6 oz. (13g)

Housing Material Matte black glass-filled
thermoplastic

Filter Material Resin-reinforced composite
honeycomb with special
matte black coating

Temp. Range +160 to -60 F
+ 71 to -51 C

Optical

% Light Loss Approximately 15%

Maintenance

Rinse with water to clear cells, blow dry

The killFlash® model PVS17-ARD is designed to eliminate potentially compromising reflections from the objective lens of the AN/PVS-17 Mini Night Vision Sight (MNVS). This compact ARD gives the same glint protection as a traditional tube over 8 inches long. The patented geometry of the ARD's honeycomb shield maintains a clear, bright view through the sight and does not interfere with target acquisition. The lightweight, low maintenance design adds virtually no additional weight to the soldier's load. To install, the ARD is simply screwed into the front of the sight. The sight's objective lens cover/day filter can still be used when the ARD is mounted.

If they don't see you... they don't shoot you.®
